1. Executive Summary

1.1 Purpose

The purpose of this project is to develop a Home Automation and Interior Design Website that enables customers to explore home automation solutions and interior design services, submit project requirements, and request

consultations. The system also provides a platform for sellers and affiliate partners to manage customer inquiries and services efficiently. Administrators can monitor and manage website activities, users, services, projects, and inquiries through a centralized dashboard.

1.2 Project Scope

The Home Automation and Interior Design Website is designed to provide customers with information about home automation products, smart home solutions, and interior design services. The website allows customers to browse services, view brands and completed projects, submit project requirements, and request consultations.

The system enables sellers to manage services, projects, and customer inquiries. Affiliate partners (interior design companies) can refer customers and track referrals. Administrators can manage users, services, projects, brands, inquiries, and website content through an admin dashboard.

The website aims to simplify communication between customers, service providers, and affiliate partners while improving inquiry management and customer engagement.

1.3 Project Success Matrix

The Project Success Matrix for the Home Automation and Interior Design Website outlines the key criteria used to evaluate the success of the project. The matrix includes both quantitative and qualitative measures focusing on system functionality, user experience, security, and business objectives.

- **Functionality:**

Criteria: Percentage of completed features.

Measurement: Verify that all essential functionalities such as service browsing, requirement submission, consultation requests, affiliate referrals, and inquiry management are implemented and working correctly.

- **Performance:**

Criteria: System response time and page loading speed.

Measurement: Conduct performance testing to ensure website pages load quickly and handle multiple users efficiently.

- User Experience (UX) and Interface (UI):

Criteria: User satisfaction and ease of navigation.

Measurement: Collect feedback from users and evaluate the usability of the website interface and overall user experience.

- Security:

Criteria: Protection of customer and business data.

Measurement: Perform security testing and authentication validation to ensure data confidentiality and secure access.

- Reliability:

Criteria: System availability and stability.

Measurement: Monitor website uptime and verify that customer inquiries and records are stored accurately without data loss.

- Affiliate Partnership Success:

Criteria: Effective referral management.

Measurement: Track the number of referrals submitted by interior design partners and the successful conversion of referrals into projects.

- Customer Inquiry Management:

Criteria: Successful handling of customer requirements.

Measurement: Verify that all customer inquiries are received, recorded, assigned, and followed up by the responsible team.

- Business Growth:

Criteria: Increase in customer engagement and leads.

Measurement: Monitor the number of inquiries, consultation requests, and project opportunities generated through the website.

2. System Overview

The Home Automation and Interior Design Website is a web-based platform designed to connect customers with home automation service providers and interior design partners. The system enables customers to explore available

services, view project portfolios, submit project requirements, and request consultations.

The platform provides sellers with tools to manage services, projects, customer inquiries, and consultations. Interior design affiliates can collaborate with the company by referring customers and tracking referral activities.

Administrators are responsible for managing website content, users, services, projects, brands, and customer inquiries through a centralized dashboard.

The system aims to improve customer engagement, simplify inquiry management, enhance communication between stakeholders, and increase business opportunities through an efficient online platform.

2.1 Key Features & Capabilities

The following are the key features and capabilities of the proposed Home Automation and Interior Design Website:

- **Customer Registration & Login:** Secure account creation and login for customers.
- **Homepage:** User-friendly homepage displaying services, brands, and featured projects.
- **Service Categories:** Organized display of Home Automation and Interior Design services.
- **Advanced Search:** Search functionality for services, projects, and brands.
- **Project Portfolio:** Showcase completed projects with images and descriptions.
- **Requirement Submission:** Customers can submit project requirements and inquiries online.
- **Consultation Request:** Customers can request consultations and site visits.
- **Seller Dashboard:** Sellers can manage services, projects, and customer inquiries.
- **Affiliate Program:** Interior design partners can refer customers and track referrals.
- **Inquiry Management:** Efficient handling and tracking of customer requirements.

- **Brand Showcase:** Display of partner brands and products.
- **Notifications:** Real-time updates regarding inquiries and consultations.
- **My Account:** Users can manage profile information and account settings.
- **Contact Page:** Direct communication between customers and the company.
- **Admin Dashboard:** Centralized management of users, services, affiliates, projects, and inquiries.
- **Reports & Analytics:** Generation of inquiry and performance reports.
- **Mobile Responsive Design:** Compatible with desktops, tablets, and smartphones.
- **Security:** Secure authentication and protection of customer information.

3. Functional Requirements

The functional requirements of the proposed Home Automation and Interior Design Website is detailed below with the user interaction.

3.1 Customer Functionalities

The customer can browse home automation and interior design services, view project portfolios, and explore partner brands. The customer can submit project requirements, request consultations, and contact the company through the website. Customers can also manage their profiles and track the status of their inquiries.

3.1.1 Homepage

The customer shall be presented with the Homepage upon accessing the website. The Homepage serves as the main entry point of the Home Automation and Interior Design Website and provides information about the company, services, projects, brands, and consultation options. The Homepage shall contain the following components:

- **Logo:** The company logo shall be displayed prominently and redirect users to the Homepage when clicked.

- **Navigation Bar:** The navigation bar shall provide links to Home, Services, Projects, Brands, About Us, Contact Us, Login, and Sign Up pages.
- **Hero Banner:** A banner section shall display featured services, promotions, and company highlights.
- **Search:** Customers shall be able to search for services, projects, and brands.
- **Service Categories:** The Homepage shall display Home Automation and Interior Design service categories.
- **Featured Projects:** A section shall showcase completed projects and project galleries.
- **Partner Brands:** The Homepage shall display partner brands associated with the company.
- **Requirement Submission:** Customers shall have quick access to submit project requirements.
- **Consultation Request:** Customers shall be able to request consultations directly from the Homepage.
- **Contact Information:** Company contact details and social media links shall be displayed.
- **Footer:** The footer shall contain quick links, company information, privacy policy, and copyright details.

User Story – Home page

User story name	Home page
As a	Customer
I want to	View the homepage of the website
So that	I can explore services, projects, brands, and company information

Pre-Conditions	• Customer has internet access. • Website is available and running.
Acceptance Criteria	• Homepage displays company logo. • Homepage displays navigation menu. • Homepage displays services and projects. • Homepage displays contact information. • Homepage loads successfully on desktop and mobile devices.
Alternate Flow	• If the homepage fails to load, an error message shall be displayed. • If service information is unavailable, the system shall display available content only.
Post-Conditions	• Customer successfully views the homepage. • Customer can navigate to other pages of the website

3.1.2 User Story – Sign Up

In the Home Automation and Interior Design Website, the Sign Up (Registration) module allows new customers to create an account in order to access the platform's full features.

This is the first step for users who want to interact with services such as home automation solutions, interior design consultations, and project requirement submissions

User story name	Sign Up
As a	Customer
I want to	Create a new account on the website

So that	I can submit requirements, request consultations, and manage my account
Pre-Conditions	• Customer has access to the website. • Customer is not already registered.
Acceptance Criteria	• Customer can enter name, email, phone number, and password. • System validates all required fields. • System creates a new account upon successful registration. • Customer receives a registration confirmation message.
Alternate Flow	• If mandatory fields are missing, the system shall display a validation message. • If the email or phone number already exists, the system shall display an appropriate error message. • If registration fails, the customer shall be prompted to try again.
Post-Conditions	• A new customer account is created successfully. • Customer can log in using the registered credentials.

3.1.3 User Story – Login

In the Home Automation and Interior Design Website, the Login module is used to authenticate registered users and provide them secure access to personalized features of the system.

Only users who have already created an account through the **SignUp process** can use the login functionality.

User story name As a I want to So that	Login Customer Log into my account
Pre-Conditions	• Customer must have a registered account. • Customer must have valid login credentials.
Acceptance Criteria	• Customer can enter email/phone number and password. • System validates the credentials. • System grants access upon successful authentication. • Customer is redirected to the dashboard or homepage after login.
Alternate Flow	• If the email/phone number or password is incorrect, the system shall display an error message. • If the account is inactive, the system shall deny access and display an appropriate message. • If the customer forgets the password, the system shall provide a password recovery option.
Post-Conditions	• Customer is successfully logged into the system. • Customer can access authorized features and services.

3.1.4 User Story – Search

In the **Home Automation and Interior Design Website**, the **Search feature** allows users to quickly find relevant services, products, brands, or design solutions by entering keywords instead of manually browsing through categories.

This feature improves user experience by making navigation faster and more efficient.

User story name As a I want to So that	Search Customer Search for services, projects, brands, and information available on the website I can quickly find relevant information without manually browsing through multiple pages
Pre-Conditions	• Customer has access to the website. • The website is operational and connected to the database. • Services, projects, and brand information are available in the system.
Acceptance Criteria	• A search bar shall be available on the website. • Customers shall be able to enter keywords into the search field. • The system shall search across services, projects, and brands. • Relevant search results shall be displayed based on the entered keyword. • Customers shall be able to select and view detailed information from

	the search results. • Search results shall be displayed within a reasonable response time.
Alternate Flow	• If no matching results are found, the system shall display a "No Results Found" message. • If the search field is empty, the system shall prompt the customer to enter a valid keyword. • If the server is unavailable, the system shall display an appropriate error message and request the customer to try again later. • If multiple matching results exist, the system shall display all relevant results in a list format
Post-Conditions	• Relevant search results are displayed to the customer. • Customer can access the selected service, project, or brand details page. • The search activity is completed successfully without affecting other website functions.

3.1.5 User Story – Service Categories

The system allows customers to view and browse different service categories. Customers can select a category such as Home Automation or Interior Design to view the related services offered by the company.

User story name	Service Categories
As a	Customer
I want to	Browse service categories

So that	I can easily find Home Automation and Interior Design services that match my requirements
Pre-Conditions	• Customer has access to the website. • Service categories are available in the system.
Acceptance Criteria	• Customer can view all service categories. • Customer can select a category. • System displays services related to the selected category. • Customer can navigate between different categories.
Alternate Flow	• If no services are available in a selected category, the system shall display an appropriate message. • If category data cannot be loaded, the system shall display an error message.
Post-Conditions	• Selected service category is displayed. • Customer can view and access services within the chosen category.

3.1.6 User Story – Service Listing Page

The Service Listing Page displays all available Home Automation and Interior Design services in a structured format. Customers can browse through the services, view basic information such as service name, image, and short description, and select a service to view detailed information. This page helps customers compare different services and find the most suitable solution for their requirements.

User story name	Service Listing Page
As a	Customer

I want to So that	View a list of available services under a selected category I can compare different services and select the one that best matches my requirements
Pre-Conditions:	• The user must have access to the website • At least one service must be available in the selected category • The service data must be stored and available in the system
Acceptance Criteria:	• The system shall display all services belonging to the selected category • Each service shall show basic details such as name, image, price range, and rating • The system shall allow filtering and sorting of services (if enabled) • The listing page shall load correctly without errors • Selecting a service shall redirect the user to the Service Detail Page
Alternate Flow:	• If no services are available in the selected category, the system shall display a “No services available” message • If the system fails to load service data, an error message shall be shown

	• If filters return no results, the system shall display “No matching services found”
Post-Conditions:	• The user is able to view and browse available services • The user may proceed to view detailed service information • User navigation activity may be recorded for system analytics (optional)

3.1.7 User Story – Service Detail Page

In the Home Automation and Interior Design Website, the Service Detail Page provides complete information about a selected service after the customer chooses it from the service listing page.

This page is designed to help customers clearly understand both home automation solutions and interior design services before making any request or booking a consultation.

User story name As a I want to So that	Service Detail Page Customer View complete details of a selected home automation or interior design service I can understand the service and decide whether to proceed with requirement submission or consultation
Pre-Conditions:	• Customer must select a service from the Service Listing Page • Service data (automation or interior design service) must be available in the system

Acceptance Criteria:	• System displays service name (e.g., smart home automation / interior design service) • System displays detailed description of the service • System displays service images or project samples • System shows pricing details or estimated cost range • System displays service provider (seller) details • System shows ratings and customer reviews (if available) • System provides options: ▪ Request Service ▪ Submit Requirement ▪ Book Consultation
Alternate Flow (if needed):	• If service is not available → display “Service not found” • If data fails to load → display retry option • If reviews not available → show “No reviews yet”

3.1.8 User Story – Requirement Submission

In the Home Automation and Interior Design Website, the Requirement Submission module allows customers to clearly describe their project needs so that service providers (sellers or interior designers) can understand and respond with suitable solutions.

This is a key feature that connects customers with service providers for both home automation systems and interior design projects.

User story name	Requirement Submission
-----------------	------------------------

As a I want to So that	Customer Submit my home automation or interior design project requirements Service providers can understand my needs and provide suitable solutions
Pre-Conditions:	• Customer must be logged into the system • Customer must have access to the Requirement Submission form • Service categories and providers must be available in the system
Acceptance Criteria:	• System allows customer to enter requirement details • Customer can select service type (home automation / interior design) • Customer can provide project details (room type, area, budget, preferences) • Customer can upload supporting documents (images, floor plan, etc.) • System validates all mandatory fields before submission • System stores requirement in the database successfully • System shows confirmation message after submission
Alternate Flow:	• If mandatory fields are missing → show validation error

	• If file upload fails → show upload error message • If user is not logged in → redirect to login page • If system error occurs → show retry message
--	--

3.1.9 User Story – Consultation Request

In the Home Automation and Interior Design Website, the Consultation Request module allows customers to book a meeting with experts such as home automation providers or interior designers to discuss their project requirements in detail.

This feature helps customers get professional advice before starting their project.

User story name As a I want to So that	Consultation Request Customer Request a consultation with a service provider (home automation expert or interior designer) I can discuss my project requirements and get professional guidance
Pre-Conditions:	• Customer must be logged into the system • Service or requirement must be selected or available • Consultation booking feature must be active
Acceptance Criteria:	• System allows customer to choose consultation type (online / offline if applicable)

	• Customer can select preferred date and time slot • System validates availability of selected time slot • System stores consultation request successfully • Confirmation message is displayed after booking
Alternate Flow:	• If selected time slot is unavailable → show alternative slots • If user is not logged in → redirect to login page • If booking fails → show error and retry option

3.1.10 User Story – Upload Documents

In the Home Automation and Interior Design Website, the Upload Documents module allows customers to upload important files related to their project so that service providers can clearly understand their requirements.

This feature is mainly used during requirement submission or consultation requests.

User story name	Upload Documents
As a	Customer
I want to	Upload supporting documents related to my project
So that	Service providers can better understand my home automation or interior design requirements
Pre-Conditions:	• Customer must be logged into the system

	• Customer must have an active requirement or consultation request • Upload feature must be enabled in the system
Acceptance Criteria:	• System allows customer to upload documents (images, PDFs, floor plans, etc.) • System validates file type and file size • Uploaded files are linked to the corresponding requirement or consultation • System stores documents securely in the database or storage server • Success message is shown after successful upload
Alternate Flow:	• If file format is not supported → show error message • If file size exceeds limit → show validation error • If upload fails → show retry option • If user is not logged in → redirect to login page

3.1.11 User Story – Contact Us

In the Home Automation and Interior Design Website, the Contact Us module allows customers to communicate directly with the website administrators or support team for any queries, issues, or feedback.

This feature acts as a general communication channel between users and the system management.

User story name	Contact Us
-----------------	------------

As a I want to So that	Customer Send messages or inquiries through a contact form I can communicate with the support team regarding services, issues, or general queries
Pre-Conditions:	• User must have access to the website • Contact Us page must be available • Internet or phone network must be available for communication
Acceptance Criteria:	• System provides a Contact Us form with fields (name, email, subject, message) • System allows users to submit queries successfully • System displays a contact phone number for direct calling support • Clicking the phone number enables direct calling (on supported devices) • System validates form fields before submission • Confirmation message is shown after successful submission
Post-Conditions:	• Customer inquiry is recorded in the system • Admin receives the message for response • Customer can also contact support directly via call

	• Communication between user and support team is established
--	--

3.1.12 User Story – My Account

In the Home Automation and Interior Design Website, the My Account module allows customers to manage their personal profile and view all their activities related to the system in one place.

This section acts as a personal dashboard for each registered user.

User story name	My Account
As a	Customer
I want to	Access and manage my personal account details
So that	I can update my profile, view my activities, and manage my service interactions
Pre-Conditions:	• Customer must be registered in the system • Customer must be logged into the website • User account data must exist in the database
Acceptance Criteria:	• System displays customer profile information (name, email, phone, etc.) • Customer can view and update personal details • System allows password change functionality • Customer can view account-related activities

	(requirements, consultations, etc.) • System saves updated information successfully • System maintains data security and privacy
Post-Conditions:	• Customer profile is updated in the system (if changes are made) • User account data remains securely stored • Customer can continue using personalized services

3.1.13 User Story – My Requirements

In the Home Automation and Interior Design Website, the My Requirements module allows customers to view and track all the project requirements they have submitted.

This feature helps users monitor the progress of their requests related to home automation systems and interior design services in one place.

User story name As a I want to So that	My Requirements Customer View and track all my submitted project requirements I can monitor the status and progress of my home automation or interior design requests
Pre-Conditions:	• Customer must be registered in the system • Customer must be logged into the website

	Customer must have submitted at least one requirement
Acceptance Criteria:	- System displays a list of all submitted requirements - Each requirement shows details such as service type, date, and status - System shows current status (Pending / In Progress / Completed) - Customer can view detailed information of each requirement - System updates requirement status when changed by admin/provider
Post-Conditions:	- Customer can successfully track all submitted requirements - System maintains updated requirement status - Service providers/admin can manage and update requirement progress

3.1.14 User Story – Notifications

In the Home Automation and Interior Design Website, the Notifications module is used to inform customers about important updates related to their activities and services in the system.

It ensures that users stay updated about their requirements, consultations, and service progress without needing to check every page manually.

User story name	Notifications
As a	Customer

I want to	Receive notifications about my activities and service updates
So that	I can stay informed about my requirements, consultations, and service progress
Pre-Conditions:	• Customer must be registered in the system • Customer must be logged in • There must be activity updates (requirement, consultation, or service status change)
Acceptance Criteria:	• System displays notifications for important updates • Notifications include: ◦ Requirement status updates ◦ Consultation booking confirmation ◦ Responses from service providers/admin • Customer can view notification list • New notifications are clearly highlighted • Notifications are stored and accessible in My Account
Post-Conditions:	• Customer receives updates in real time or on login • Notification history is stored in the system • Customer stays updated about all activities

3.1.15 User Story – Feedback & Reviews

In the Home Automation and Interior Design Website, the Feedback & Reviews module allows customers to share their experience after using a service. It helps improve service quality and builds trust among users.

User story name	Feedback & Reviews
As a	Customer
I want to	
So that	
Pre-Conditions:	• Customer must be registered and logged into the system • Customer must have used or viewed a service • Service details must be available in the system
Acceptance Criteria:	• System allows customer to submit ratings (e.g., 1 to 5 stars) • System allows customer to write a written review • Feedback is linked to the selected service • System displays submitted reviews on the service detail page • System validates that rating and review are properly entered before submission
Post-Conditions (if needed):	• Feedback is stored in the system database • Review becomes visible to other users

	Service providers can view customer feedback for improvement
--	--

3.2 Seller Functionalities

In your Home Automation & Interior Design Website, the Seller is the Home Automation Company (the service provider). Their main job is to manage services and respond to customer requirements.

3.2.1 Login

The seller can log in to the platform by entering valid credentials in the seller portal. The login page enables authorized sellers to access the dashboard and manage services, projects, customer requirements, and consultations. The login page shall consist of the following:

- **Email/Username Field:** Sellers shall enter their registered email address or username.
- **Password Field:** Sellers shall enter their password for authentication.
- **Forgot Password Link:** A link shall be provided to allow sellers to reset their password if forgotten.
- **Login Button:** A button shall be provided to initiate the login process after entering valid credentials.
- **Remember Me Option:** An optional checkbox shall allow sellers to remain logged in across sessions.
- **Validation Messages:** The system shall display appropriate error messages for invalid credentials or missing required fields.
- **Secure Authentication:** The system shall verify seller credentials and grant access only to authorized users.

3.2.2 Dashboard

The Dashboard is the main page available to the seller after successful login. It provides an overview of customer inquiries, consultation requests, projects, and other business activities. The dashboard shall consist of the following:

- **Customer Requirements Summary:** Displays the total number of customer requirements and recent inquiries.
- **Consultation Requests:** Displays pending, scheduled, and completed consultation requests.
- **Project Overview:** Displays ongoing and completed projects managed by the seller.
- **Recent Activities:** Displays recent actions such as new inquiries, consultation bookings, and project updates.
- **Notifications:** Displays alerts related to customer requirements, consultations, and system updates.
- **Quick Access Links:** Provides shortcuts to manage services, projects, customer requirements, and profile settings.
- **Reports Summary:** Displays key statistics and performance information related to the seller's activities.

3.2.3 Manage Services

The seller can manage the Home Automation and Interior Design services available on the website. The Manage Services page shall consist of the following:

- **Add Service:** Sellers can add new Home Automation and Interior Design services.
- **Edit Service:** Sellers can update service details, descriptions, and pricing information.
- **Delete Service:** Sellers can remove services that are no longer available.
- **Service Categories:** Sellers can assign services to categories such as Home Automation and Interior Design.

- **Service Images:** Sellers can upload and manage images related to services.
- **Service Availability:** Sellers can enable or disable services based on availability.

3.2.4 Manage Projects

The seller can manage Home Automation and Interior Design projects displayed on the website. The Manage Projects page shall consist of the following:

- **Add Project:** Sellers can add new project details, including project name, description, and completion status.
- **Edit Project:** Sellers can update existing project information.
- **Delete Project:** Sellers can remove project details that are no longer required.
- **Project Images:** Sellers can upload and manage project images to showcase completed work.
- **Project Categories:** Sellers can assign projects to Home Automation or Interior Design categories.
- **Project Portfolio:** Sellers can maintain and update the project portfolio displayed to customers.

3.2.5 View Customer Requirements

The seller can view customer requirements submitted through the website. This functionality helps the seller understand customer needs and provide appropriate Home Automation and Interior Design solutions. The page shall consist of the following:

- **Requirement List:** Displays all customer requirements submitted through the website.
- **Customer Details:** Displays customer information such as name, contact details, and inquiry date.
- **Requirement Details:** Displays project requirements, preferences, budget, and additional information provided by the customer.

- **Requirement Status:** Displays the current status of the requirement (New, In Progress, Completed).
- **Search Requirements:** Allows sellers to search and locate specific customer requirements.
- **Requirement History:** Allows sellers to view previously submitted requirements and their status.

3.2.6 Manage Consultations

The seller can manage consultation requests submitted by customers through the website. This functionality helps the seller schedule and coordinate discussions regarding Home Automation and Interior Design projects. The page shall consist of the following:

- **View Consultation Requests:** Displays all consultation requests submitted by customers.
- **Schedule Consultation:** Allows sellers to schedule consultation meetings or site visits.
- **Update Consultation Details:** Allows sellers to modify consultation date, time, and other details.
- **Consultation Status:** Displays the status of consultations such as Pending, Scheduled, Completed, or Cancelled.
- **Customer Information:** Displays customer details related to the consultation request.
- **Consultation History:** Allows sellers to view previous consultation records and outcomes.

3.2.7 Respond to Customers

The seller can communicate with customers regarding their inquiries, requirements, and consultation requests. This functionality helps the seller provide appropriate Home Automation and Interior Design solutions and maintain effective customer communication. The page shall consist of the following:

- **View Customer Inquiries:** Displays inquiries and messages submitted by customers.
- **Send Responses:** Allows sellers to respond to customer inquiries and questions.
- **Provide Project Information:** Allows sellers to share service details, project information, and recommendations with customers.
- **Quotation Response:** Allows sellers to provide quotations and pricing details based on customer requirements.
- **Communication History:** Displays previous communications between the seller and customer.
- **Response Status:** Allows sellers to track whether customer inquiries have been responded to or are pending.

3.2.8 Manage Profile

The seller can manage and update their profile information on the website. This functionality allows sellers to maintain accurate company details and account information. The page shall consist of the following:

- **View Profile:** Allows sellers to view their profile information.
- **Update Company Information:** Allows sellers to update company name, address, and business details.
- **Manage Contact Information:** Allows sellers to update phone number, email address, and other contact details.
- **Change Password:** Allows sellers to change their account password.
- **Profile Image:** Allows sellers to upload or update their company logo or profile image.
- **Save Changes:** Allows sellers to save and update profile information successfully

3.2.9 View Reports

The seller can view reports related to customer inquiries, consultation requests, and project activities. This functionality helps sellers monitor business performance and track customer interactions. The page shall consist of the following:

- **Customer Requirement Reports:** Displays reports of customer inquiries and submitted requirements.
- **Consultation Reports:** Displays details of scheduled, completed, and pending consultations.
- **Project Reports:** Displays information about ongoing and completed Home Automation and Interior Design projects.
- **Status Reports:** Displays the status of customer requirements, consultations, and projects.
- **Date-wise Reports:** Allows sellers to view reports based on a selected date range.
- **Summary Reports:** Provides an overview of business activities and customer engagement.

3.3 Affiliate Functionalities

In Home Automation & Interior Design Website, the Affiliate is an Interior Design Partner who works with the Home Automation company.

The affiliate acts as a business partner who helps connect potential customers with the Home Automation company. When an interior designer meets a customer who requires home automation solutions, the designer can refer that customer through the website. The Home Automation company then follows up with the customer, provides consultation, and completes the project.

3.3.1 Register/Login

The affiliate partner can register and log in to the platform to access affiliate services and manage customer referrals. This functionality ensures that only authorized interior design partners can access the affiliate portal. The page shall consist of the following:

- **Registration:** Allows new interior design partners to create an affiliate account by providing the required information.
- **Login:** Allows registered affiliate partners to access the system using valid credentials.
- **Forgot Password:** Allows affiliate partners to recover or reset their password.
- **Account Verification:** Verifies affiliate credentials before granting access to the affiliate dashboard.
- **Secure Authentication:** Ensures that only authorized affiliate partners can access referral-related information.

3.3.2 View Referred Leads

The affiliate partner can view customer leads that have been referred to the Home Automation company. This functionality allows the affiliate to monitor referred customers and track potential business opportunities. The page shall consist of the following:

- **Lead List:** Displays all customers referred by the affiliate partner.
- **Customer Details:** Displays customer information such as name, contact details, and inquiry date.
- **Requirement Details:** Displays the requirements submitted by the referred customer.
- **Lead Status:** Displays the current status of each referred lead.
- **Search Leads:** Allows affiliate partners to search and locate specific referred leads.
- **Lead History:** Allows affiliate partners to view previously referred customer leads.

3.3.3 Refer Customers

The affiliate partner can refer customers who require Home Automation services to the company. This functionality helps connect potential customers

with the seller for further consultation and project execution. The page shall consist of the following:

- **Customer Details:** Allows the affiliate partner to enter customer information.
- **Requirement Details:** Allows the affiliate partner to provide customer requirements related to Home Automation services.
- **Submit Referral:** Allows the affiliate partner to send customer referrals to the seller.
- **Referral Confirmation:** Displays a confirmation message after successful referral submission.
- **Referral History:** Allows the affiliate partner to view previously submitted referrals.

3.3.4 View Referral Status

The affiliate partner can view the status of customers referred to the Home Automation company. This functionality helps the affiliate partner track the progress of referred customers. The page shall consist of the following:

- **Referral List:** Displays all customer referrals submitted by the affiliate partner.
- **Status Information:** Displays the current status of each referral, such as New, In Progress, or Completed.
- **Customer Details:** Displays basic information about the referred customer.
- **Requirement Summary:** Displays the requirements submitted for the referred customer.
- **Status Updates:** Allows affiliate partners to view updates related to the referral process.

3.3.5 Update Partner Profile

The affiliate partner can manage and update their profile information on the website. This functionality allows partners to maintain accurate contact and business information. The page shall consist of the following:

- **View Profile:** Allows affiliate partners to view their profile information.

- **Update Partner Information:** Allows affiliate partners to update their name, company name, and business details.
- **Manage Contact Information:** Allows affiliate partners to update phone number and email address.
- **Change Password:** Allows affiliate partners to change their account password.
- **Save Changes:** Allows affiliate partners to save and update profile information successfully.

3.3.6 Communicate with Seller

The affiliate partner can communicate with the seller regarding customer referrals and project requirements. This functionality helps ensure effective coordination between the affiliate partner and the Home Automation company. The page shall consist of the following:

- **View Messages:** Allows affiliate partners to view messages received from the seller.
- **Send Messages:** Allows affiliate partners to send messages to the seller regarding referred customers.
- **Requirement Discussions:** Allows affiliate partners and sellers to discuss customer requirements and project details.
- **Referral Updates:** Allows affiliate partners to receive updates on referred customers from the seller.
- **Communication History:** Displays previous communications between the affiliate partner and the seller.

4. Admin Panel Features

The Admin Panel provides administrative control over the Home Automation and Interior Design Website. It allows administrators to manage customers, sellers, affiliate partners, services, projects, inquiries, brands, and website content.

4.1 Admin Login

The administrator can log in to the system using valid credentials to access the admin panel. This functionality ensures that only authorized administrators can manage the website and its operations. The page shall consist of the following:

- **Username/Email Field:** Allows administrators to enter their registered username or email address.
- **Password Field:** Allows administrators to enter their password for authentication.
- **Forgot Password:** Allows administrators to reset their password if forgotten.
- **Login Button:** Allows administrators to access the admin dashboard after successful authentication.
- **Validation Messages:** Displays appropriate error messages for invalid login credentials.
- **Secure Authentication:** Ensures that only authorized administrators can access the admin panel.

4.2 Dashboard Management

The Dashboard Management functionality provides the administrator with an overview of the website's activities and performance. It enables administrators to monitor customers, sellers, affiliate partners, inquiries, and projects from a centralized dashboard. The page shall consist of the following:

- **Customer Summary:** Displays the total number of registered customers.
- **Seller Summary:** Displays the total number of registered sellers.
- **Affiliate Summary:** Displays the total number of affiliate partners.
- **Inquiry Overview:** Displays recent customer inquiries and requirement submissions.
- **Project Overview:** Displays information about ongoing and completed projects.
- **Notification Panel:** Displays important system alerts and updates.
- **Quick Access Links:** Provides shortcuts to manage customers, sellers, affiliates, services, projects, and inquiries.

4.3 Customer Management

The Customer Management functionality allows the administrator to manage customer accounts and activities on the website. It enables administrators to monitor customer information, inquiries, and account status. The page shall consist of the following:

- **View Customers:** Displays a list of all registered customers.
- **Customer Details:** Allows administrators to view customer profile information and contact details.
- **Manage Customer Accounts:** Allows administrators to activate, deactivate, or update customer accounts.
- **View Customer Requirements:** Allows administrators to view requirements and inquiries submitted by customers.
- **Search Customers:** Allows administrators to search and locate specific customer accounts.
- **Customer Activity Monitoring:** Allows administrators to monitor customer interactions and activities on the website.

4.4 Seller Management

The Seller Management functionality allows the administrator to manage seller accounts and activities on the website. It enables administrators to monitor seller information, services, projects, and account status. The page shall consist of the following:

- **View Sellers:** Displays a list of all registered sellers.
- **Seller Details:** Allows administrators to view seller profile information and contact details.
- **Manage Seller Accounts:** Allows administrators to activate, deactivate, or update seller accounts.
- **Monitor Services:** Allows administrators to view and monitor services offered by sellers.
- **Monitor Projects:** Allows administrators to view projects managed by sellers.

- **Search Sellers:** Allows administrators to search and locate specific seller accounts.

4.5 Affiliate Management

The Affiliate Management functionality allows the administrator to manage affiliate partner accounts and activities on the website. The page shall consist of the following:

- **View Affiliates:** Displays a list of all registered affiliate partners.
- **Affiliate Details:** Allows administrators to view affiliate profile information and contact details.
- **Manage Affiliate Accounts:** Allows administrators to activate, deactivate, or update affiliate accounts.
- **Monitor Referrals:** Allows administrators to view customer referrals submitted by affiliates.
- **Search Affiliates:** Allows administrators to search and locate specific affiliate partners.

4.6 Service Management

The Service Management functionality allows the administrator to manage Home Automation and Interior Design services displayed on the website. The page shall consist of the following:

- **View Services:** Displays all available services.
- **Add Services:** Allows administrators to add new services.
- **Edit Services:** Allows administrators to update service information.
- **Delete Services:** Allows administrators to remove services.
- **Manage Service Categories:** Allows administrators to organize services under appropriate categories.

4.7 Brand Management

The Brand Management functionality allows the administrator to manage partner brands displayed on the website. The page shall consist of the following:

- **View Brands:** Displays all partner brands.
- **Add Brands:** Allows administrators to add new brands.
- **Edit Brands:** Allows administrators to update brand information.
- **Delete Brands:** Allows administrators to remove brands.
- **Manage Brand Logos:** Allows administrators to upload and update brand logos.

4.8 Project Management

The Project Management functionality allows the administrator to manage Home Automation and Interior Design projects displayed on the website. The page shall consist of the following:

- **View Projects:** Displays all projects available on the website.
- **Add Projects:** Allows administrators to add new project details.
- **Edit Projects:** Allows administrators to update project information.
- **Delete Projects:** Allows administrators to remove projects.
- **Manage Project Images:** Allows administrators to upload and update project images.

4.9 Inquiry Management

The Inquiry Management functionality allows the administrator to manage customer inquiries and requirements submitted through the website. The page shall consist of the following:

- **View Inquiries:** Displays all customer inquiries.
- **View Customer Requirements:** Displays customer requirements and project details.
- **Assign Inquiries:** Allows administrators to assign inquiries to sellers.

- **Update Inquiry Status:** Allows administrators to update inquiry progress.
- **Search Inquiries:** Allows administrators to search and locate specific inquiries.

4.10 Content Management

The Content Management functionality allows the administrator to manage website content and information. The page shall consist of the following:

- **Manage Homepage Content:** Allows administrators to update homepage information.
- **Manage About Us Content:** Allows administrators to update company information.
- **Manage Contact Information:** Allows administrators to update contact details.
- **Manage Website Images:** Allows administrators to upload and update website images.
- **Update Content:** Allows administrators to modify website content.

4.11 Report Generation

The Report Generation functionality allows the administrator to generate and view reports related to website activities. The page shall consist of the following:

- **Customer Reports:** Displays reports related to customers.
- **Seller Reports:** Displays reports related to sellers.
- **Affiliate Reports:** Displays reports related to affiliate partners.
- **Inquiry Reports:** Displays reports related to customer inquiries.
- **Project Reports:** Displays reports related to projects and services.

4.12 Notification Management

The Notification Management functionality allows the administrator to manage notifications sent through the website. The page shall consist of the following:

- **View Notifications:** Displays all system notifications.
- **Send Notifications:** Allows administrators to send notifications to customers, sellers, and affiliates.
- **Manage Notification Settings:** Allows administrators to configure notification preferences.
- **System Alerts:** Displays important system messages and updates.

4.13 Profile Management

The Profile Management functionality allows the administrator to manage personal account information. The page shall consist of the following:

- **View Profile:** Allows administrators to view profile information.
- **Update Profile Information:** Allows administrators to modify account details.
- **Manage Contact Information:** Allows administrators to update contact information.
- **Change Password:** Allows administrators to change account passwords.
- **Save Changes:** Allows administrators to save updated profile information.

4.14 Logout

The Logout functionality allows the administrator to securely exit the admin panel. The page shall consist of the following:

- **Secure Logout:** Terminates the current admin session.
- **Session Management:** Prevents unauthorized access after logout.
- **Redirect to Login Page:** Redirects the administrator to the login page after logout.
- **Logout Confirmation:** Displays confirmation that logout was successful.

5. Additional System Specifications

The following requirements are the additional functionalities that the Home Automation & Interior Design Website shall be capable of.

Feature	Description
Consultation Scheduling	Customers shall be able to schedule consultations with sellers through the website.
Document Upload	Customers shall be able to upload floor plans, room layouts, images, and project-related documents.
Service Search	Users shall be able to search Home Automation and Interior Design services using keywords.
Project Portfolio Display	The website shall display completed Home Automation and Interior Design projects for customer reference.
Affiliate Referral System	Interior Design Partners shall be able to refer customers and track referral status.
Inquiry Tracking	Customers shall be able to track the status of submitted requirements and inquiries.
Notification System	The system shall provide notifications related to inquiries, consultations, referrals, and project updates.
Service Categorization	Services shall be organized into Home Automation and Interior Design categories for easy navigation.
Brand Showcase	The website shall display partner brands and products used in Home Automation solutions.
Role-Based Access Control	Access shall be controlled based on Customer, Seller, Affiliate, and Administrator roles.

6. Non-Functional Requirements

Non-functional requirements define the quality attributes and operational standards of the Home Automation & Interior Design Website.

6.1 Performance

- The system shall provide fast response times for user requests.
- Web pages shall load efficiently under normal usage conditions.

6.2 Security

- User authentication shall be required for protected functionalities.
- Passwords and user data shall be stored securely.
- Access shall be restricted based on user roles (Customer, Seller, Affiliate, and Admin).

6.3 Reliability

- The system shall operate consistently with minimal downtime.
- Data shall be accurately stored and retrieved.

6.4 Availability

- The website shall be available 24 hours a day and 7 days a week, except during maintenance periods.

6.5 Usability

- The system shall provide a simple and user-friendly interface.
- Navigation shall be easy for all users.

6.6 Compatibility

- The website shall support major web browsers such as Chrome, Firefox, Edge, and Safari.
- The system shall be accessible on desktops, laptops, tablets, and mobile devices.

6.7 Scalability

- The system shall support future growth in users, services, projects, and business partners.

6.8 Maintainability

- The system shall be designed to allow easy updates, modifications, and maintenance.

6.9 Backup and Recovery

- Regular backups shall be maintained.
- The system shall support data recovery in case of failure or data loss.

7. Assumptions & Dependencies

7.1 Assumptions

- Users (customers, sellers, and affiliates) have basic knowledge of using web applications.
- Users will have access to a stable internet connection to use the website.
- Sellers and affiliates are properly registered and approved by the administrator.
- All user-provided information such as requirements, documents, and profile details are accurate.
- Customers will use the platform mainly for inquiry, consultation, and requirement submission purposes.
- The system will be accessed through modern web browsers only.

7.2 Dependencies

- The system depends on a **web server** for hosting the application.
- A **database system** is required to store user data, services, requirements, consultations, and feedback.
- The system depends on **browser compatibility** (Chrome, Firefox, Edge, Safari).
- Internet connectivity is required for all system operations.
- The system may depend on **email or notification services** for sending alerts and updates.

- File upload functionality depends on **server storage capacity** for storing documents and images.
- Role-based access control depends on a secure **authentication and authorization mechanism**.

8.Conclusion

The Home Automation and Interior Design Website is a web-based platform that connects customers with sellers to explore services, submit requirements, and book consultations. It improves communication between users and service providers through a centralized system for managing services, projects, and inquiries.

The system simplifies the process of finding and managing home automation and interior design solutions, making it more efficient, organized, and user-friendly. It also allows future enhancements such as mobile applications and additional features.
